Comments: The nation, the world and all inhabitants DESPERATELY need mature and old growth forests for our survival. Even without atmospheric pollution, these wild places have a mental and emotional healing effect
EVEN ON PEOPLE WHO DON'T GO THERE!

Think of one's reaction to the opening shots of a nature documentary - what that does to your heart and mind, to your stress level - ONLY the forests can provoke the forest reaction!

We can have recreational access to the outskirts, but encroaching into the forests themselves for ANY purpose is destructive in both short and long term, and much of that destruction is not repairable within many lives of humans.

PLEASE protect and support the forests. We need them!
