Title:

Comments: Protecting mature and old-growth do the following:

- \* Save wildlife like the Northern Spotted Owl and Marbled Murrelet
- \* Fight climate change and reduce wildfire risk - cutting them down does the opposite.
- \* Increase recreational value, clean water availability, and vital fish habitat.

Please don't raise logging limits to 120-150 years. Please don't value timber harvest from old growth forests over the value of old growth forests environmental and recreational importance.
