Comments: Hi, this is not the time to make drastic changes that will negatively impact our precious Siuslaw National Forest.

I support the DEIS- Option B's Approach of not using fuel load reduction, however I believe the following:

- The DEIS should consult tribes for proper fire use
- Revise the DEIS for wet and rainforest life zones
- Base thinning practices on wildfire resistance and retention and build up of sequestered carbon for wet and rainforest life zones.
- commercial thinning must be replaced by forest service budget funded thinning
- Supportive infrastructure for recreational activities
