Comments: I have read the DEIS for the NW Forest Plan amendment and am deeply troubled by the attempts to reverse the protections of our mature & old growth forests among other things in all of the alternatives except for Alternative A- the no action alternative. Based on alternatives B-D's cynical attempts to increase the cutting of our forests in the name of "forest health" & "fuels reduction for fires" I ask that you stop this plan amendment by going with Alternative A- the no action alternative. Climate change & loss of biodiversity are real & selling off our trees to timber corporations is not the path forward to dealing with these problems but will only make them worse.
