Comments: Our future relies on in-tact old growth forests. Do not raise the timber logging limits to 120-150 years. This will cause irreversible loss of habitat and ecosystem that can only be built over long time spans. These are fragile and extremely important ecosystems for many many reasons and they must be protected. Please focus on saving wildlife ( the northern spotted owl and marbled murrelet included). In tact old growth forests fight climate change and reduce wildfire risk. Logging them does not decrease wildfire risk, and hinders the earths ability to keep our environment livable. These spaces should continue to be spaces for recreation, clean water and fish habitat. They should not be sold off or logged as that will benefit a very small group of people. These spaces provide so much for so many. Please be wise, we cannot rebuild what is lost in the event of logging.
