First name: Mark

Last name: Garcia

Organization:

Title:

Comments: Only 5% or less of old growth forest remain and other forest areas are not managed properly because they are being managed for profit, not for biodiversity and preservation. We need independent third party review of logging and management plans.

Industry has a vested interest in making profits and so will always want to do what is best for shareholders in the short-term.

The health of the planet depends on the health of these forests and their habitat for species. Please protect it.
