Title:

Comments: We must save our public land Climate Forests from cutting in Old-Growth areas (Late Succession Reserves) and protect maturing stands too. These Pacific Coast Temperate Rainforests are of global significance in the battle against climate change. Therefore it is our responsibility to protect these tremendous carbon sequestration machines, this canopy of titans, that are on our own Oregon public land. **THESE ARE OUR TREES TO STEWARD !** Billions of people in the world are depending on us to do our part and keep them standing for their survival's sake.

Therefore move sequestering carbon from our carbon-saturated atmosphere to the top of our forest management plan priorities.

Also, I endorse the Coast Range Association's (CRA) comments on the DEIS. Please fully consider the CRA's comments.
