Title:

Comments: Please choose Alternative C for the future of the NWFP. It seems most in line with the long term goals of the original NWFP and still allows for some updated management practices. Of course previously harvested and poorly managed forest and crop plantation needs better management, but that should not come at the cost of harvesting any LSR's or old-growth for wildfire hazard mitigation or timber harvest goals. The past USFS policies and timber industry practices are why we are here with this mess to deal with, please don't take steps backwards by allowing more conversion of healthy forests to plantation stands.

Thank you for your consideration,

Chris Korbulic
