Title:

Comments: Please stop the proposed changes that puts the U.S. Forest Service at risk!

This plan would vastly increase logging in mature and old-growth forests - putting wildlife, clean water and climate at risk.

Please protect mature and old-growth forests - don't raise logging limits to 120-150 years.

Save wildlife like the Northern Spotted Owl and Marbled Murrelet.

Keeping forests intact helps fight climate change and reduces wildfire risk - cutting them down does the opposite!

Do support Tribal stewardship - but don't tie it to logging increases.

We must value recreation, clean water and fish habitat over timber profits.

Please for future generations save our forests!
