Comments: Trailless areas help protect plants and wildlife by keeping Wilderness from being overrun by humans, and offer a truly primitive experience for those who venture into these areas.

The Presidential Range-Dry River Wilderness, where the trail reroute is proposed, is 29,000 acres of spruce-fir and northern hardwood forests, steep slopes, high ridgelines, and fragile alpine and subalpine habitat. Native wildlife living here include moose, black bears, Canada lynx, fishers, beavers, white-tailed deer, coyotes, peregrine falcons, and bobcats. Let's keep this wildlife protected, without interruptions, it's their living space
