First name: Patricia

Last name: Simmons

Organization:

Title:

Comments: There is no proof that purposely burning trees and brush keeps the area from not burning in a forest fire, which have tremendous winds high up and due to drought and other natural events. You are not evaluating the waste of trees that currently help protect us from CO2, wildlife habitat protection, wildlife migration protection, human health breathing the smoke you are causing. Read the scientific evidence about what I am saying. Stop ruining our forests and our streams with this unnecessary, costly project.
