Comments: My reservations concerning this project are largely based on my experience with the thinning and commercial logging done up Bozeman Creek, Leverich and Kirk Hill. Much of the logging was done directly next to the highly used trails there- felt like little consideration was given to the recreational user. And large slash piles have been left on the rails. The roads built were considerable and as of last fall, no effort appeared to have been taken to address the considerable damage done. My experience so far of those efforts is that logging, not wildfire safety appeared to be the primary goal, and even in these heavily used areas.
