Title:

Comments: I am very concerned that the water quality and sewage treatment facilities are in questionable condition after years of improper maintenance, testing and reporting as prescribed by governmental mandates. Additionally I would like to know what if anything is being reviewed to address the noise pollution from live outdoor music which occurs too often to unreasonable hours in the evening.

It has been reported that Eric Jacobsen has stated that he would need to double the revenue to make the ongoing operation of the lodge financially viable. Assuming this would double the vehicular traffic as well as the load on the grey water and sewage treatment systems, how can you possibly approve the issuance of any permitting without the impact studies which are typically required?
