Comments: I am super excited about the Herber Glacier Cabin.

This cabin will align with FS sustainable cabin strategy and the direction of the 2016 Tongass Plan.

The cabin will help meet the growing huge demand for cabins that the FS cabins and other Juneau cabins are not currently able to meet.

The proposed location of the Herbert Cabin will contribute to meeting FS goals. It's location provided opportunities for challenge and remoteness but also being accessible by a vehicle accessed trailhead. The cabin provides expanded opportunities to connect other recreation opportunities: connecting loops to Peterson Lake, Windfall Lake and John Muir cabins, as well as Grandchild's, to the icefield, to packrafting, mountain biking, as well as expanding winter opportunity.

The Herbert Glacier and River provide a unique outdoor recreation opportunity. It provides locals the opportunity to enjoy a glacial environment with the Mendenhall largely given over to commercial use. The area supports an important sockeye run and is designated as a T77 watershed.

This cabin is the single best spot the Forest Service should prioritize!
