Comments: I object to the encino vista project. 130000 acres is huge and the fires and thinning and logging have already exposed valuable ground for habitat and ecosystems. The warming and d et pletion of the soil helps not close mate change. Our temperatures in the summer are becoming unbearable for humans not to mention other creatures and flora.
Why are not other methods being researched as possible alternatives aside from thinning , piling and burning? They have proven to be not so duccessfûl and they call more fires. They are chasing the rain away.
The snow pack from winter 24-25 was dismal. The earth is dry. It mate as of fighting the symptoms it is past time to research the causes and to change the actions.
Please do not pass the horrible plan.
