Last name: Morrow

Organization:

Title:

Comments: This permit should not be renewed for 20 years. There are too many issues involving lake pollution, increased area user impacts, future development plans, etc., that must be resolved and mitigated to continue this special use permit. The SPU should be renewed for one year at a time, until these issues are resolved and mitigated. The sewage lagoon must be repaired before lodge operations start up again. The footprint for development should never be increased, because the cumulative impacts of area use have been maximized, and the people have spoke against any new intense commercial expansion. Increased footprint development would ruin the historic and overall ecosystem qualities of the area that support endangered species, and the aesthetic natural qualities of the area. The full operations plan should be available for the public to review. The SPU warrants a full EIS analysis.

Thank you,

Brent Morrow, MS, MPA
