First name: J

Last name: Ammon

Organization:

Title:

Comments: No Chemicals should be used as this can disturb other flora and fauna. Mechanical minimally invasive methods by individuals except for poison hemlock or well tested biological means could be tried in small observed areas to ensure the least amount of damage to the surroundings. This is not something that should be done in haste without tests and studies conducted by 3rd party environmental groups, to ensure care is used over speed and long term health of public lands is protected.

Land is precious and sacred and needs to be treated with utmost respect at all times.
