Comments: Thank you for including my comments and recommendations into the formal record. Please extend the comment period and prepare to do a fully complete environmental impact statement as defined by federal, state, local law and international treaty. This project will cause harm to the very basic human need for water, an element of first medicine. Humans, plants and animals need clean water to thrive in community and on the planet. Trust responsibility extends far beyond the right to exploit and commodify natural elements for production. What safe guards to the human environment are established to support this massive industrial footprint?
