Comments: I am urging you to NOT go through with this drilling project. It's not only a beautiful landscape we all deserve to experience. The land is a valuable, complex ecosystem AND a culturally significant piece of land to the Lakota people, from whom this country has already taken so much. This idea that we as people need to mine more, produce more, is an illness. One that's quickly destroying any semblance of hope I have for a bountiful future with no shortage of clean air, biodiversity, and ample outdoor spaces to admire for what they are, not what can be extracted from them. Again, PLEASE take these words into consideration, really sit with the inevitable consequences this drilling will bring. Thank you.
