Comments: Questions and Concerns:

Has the company responsible for the work been thoroughly vetted. Are they doing the work themselves or contracting out?

Is there a reclamation bond in place?

What is the royalty rate for precious metals? compared to oil and gas @ 12.5%?

Is there a liability policy plan in place to protect public individuals, private parties?

Is this permit only for the precious metals mentioned and not for other ventures at the site, example tar sands.

The concern: even though it's unlikely tar sands are this far north. there are tar sands in white rocks canyon, and in these more pristine areas, it would just be tragic.
