Comments: BHCWA's research tells us that the Rochford Mineral Exploratory Drilling Project #67838 would involve 18 drill pads. Exploration could contaminate water in the upper Rapid Creek watershed, with some proposed drill pads very close to streams. And there is also the potential for contamination or cross-contamination of underground water sources.

This is unacceptable as it not only puts the people who rely on that water at risk, but it also risks, the nature and all of the animals and plants that live in the area. Every single day we are losing thousands and thousands of acres of natural forests and we cannot afford to lose anymore. I request a 60 day extension for public comment please.
