Comments: I thought the Forestry Service protects land not destroy it. Has there not been enough ecological damage done in this country? It is wrong to do anything on sacred land that has belonged to native Peoples for centuries. The People nurtured this beautiful land, respected nature. Drilling will damage not only the land, wildlife will suffer. The greed for minerals has touched off a decline in our air, our weather patterns, loss of whole species and is a danger to human life. Earth will retaliate and it won't be pretty. Stop the drilling
