Comments: I am concerned about the inclusion of OROR 070802 as a potential lease option because it contains a high level of critical habitat and old growth forest. Even with stipulations to a lease, the potential for unrecoverable damage to the biosystem is unacceptable. Geothermal power plants require much water to operate which could affect the local water supplies, particularly as we have had such an increase in drought in the past decade. In addition, there are recognized risks of air pollution, wildlife and fish death, toxic emissions, and potential for earthquake triggering. Please keep in mind the late-successional reserve designation of a quarter of the proposed lease land as well.
