Title:

Comments: I am against any mining adjacent to Pe'Sla on Lakota sacred lands, where Native Americans practice sacred rituals. There has been an independent analysis of the project, which has shown the potential for environmental degradation and especially water contamination, both in the upper Rapid Creek watershed and in underground water sources.

The name of the drilling project is "Rochford Mineral Exploratory Drilling Project #67838." I request a 60 day public extension of the "scoping" public comment period. It's only reasonable and fair to allow the public more time to comment. There is no reason for the mining company to be in that much of a hurry to push it through.

Thank you.
