Comments: You should not issue a new special use permit until the wastewater lagoons have been repaired or replaced, and wastewater infrastructure owned by thee permit holder have been thoroughly inserted and repaired as needed, and there is a reliable and safe wastewater system in operation. The Montana Department of Environmental Quality found that the existing wastewater system for Holland Lake Lodge was leaking thousands of gallons of effluent into ground every day. Other evidence suggests that the sewage holding tank within the permit area is also leaking.

Please do what's truly best for Holland Lake and the people who enjoy it.
