Comments: Turning federal public land into private land is disastrous for our environment.

Roughly 27% of US land is federal public land, which is a low figure given our climate crisis. The idea of losing more of it to private corporations means more land under threat of environmental destruction. The addition of more parking, more cars and trucks, more skiers, more ski lifts, more lodges and hotels and cafes in the beautiful Teton Range makes me sick to my stomach. Aren't there enough places to ski? How could one not be satisfied with the existing 480 ski resorts in the United States? Additionally, privatizing public land means that one person, or one small group of people will be able to profit personally from the land that once profited all Americans equally. That is a shame, especially for the many of us who don't have the ability to even conceive of owning any land within the beautiful Teton Valley!

Public land means we can all enjoy the land equally. NO PRIVATIZING THE TETON NATIONAL FOREST!
