Comments: After sending in my comments, I read some of the comments that others have submitted and pose some questions (as a lay-person), asking the Custer Gallatin National Forest to consider the following:

- 1 - Does the proposed action follow the best, most current, available science?
- 2 - What will the impacts of the proposed action be to wildlife?
- 3 - What will the impacts of the proposed action be to the aesthetic and recreational qualities of this very popular area of Custer Gallatin National Forest?
- 3 - Are you going against the public trust when former Logging Company lands were combined with existing forest service lands, years ago in the Cottonwood Creek valley?
- 4 - Do you truly stand with the forest, its ecosystems, wildlife, and long-term forest health in the proposed action?
