Title:

Comments: I am a grouse hunter, a fly fisherman, and a father. I fully support this project as we have been vastly undercutting national forest in reference to the the optimal percentage of early successional in a healthy forest system. Without projects like these I am quite sure my future grandchildren will live in mountains without grouse and other critters that rely on this crucial habitat that has all but disappeared in the last three decades for no other reason than our acquiescence to the loudest voice screaming bad science. Thank you for your consideration.
