Comments: Hi,

Extracting resources from this area will cause irreparable harm to the ecosystem. It will have cascading negative effects for the human populations as well as plants and wildlife. We need to NOT degrade our natural areas any further. The earth's wildlife population has been extremely reduced in just half a century. This needs to end if humans want to continue living on a rock with limited resources flying through space. Please consider the future generations o wildlife and humans that would be affected negatively from this project.

There is no business on a dead planet.

Sincerely,

Zach Pesch, M.S.
