Comments: As someone who has hiked in wilderness areas, I appreciate the wild character of the area along with the inherent risks. I like that mechanical equipment is not used in those areas and I will not be subjected to the noise and smell of such equipment. Therefore, I'm surprised that the Forest service wants to use mechanical equipment including helicopters, jackhammers and motorized equipment to improve the Mount Timpanogos Wilderness. This goes against the Wilderness Act and obviously needs an Environmental Impact Statement prior to any work being done. Please uphold the Wilderness Act and do not allow mechanical equipment to be used in this area. Thank you.
