Comments: This is not a difficult decision for The Forest Service - just leave it alone. In fact please do that much more often with public lands. Nature knows much better than us how to take care.

The Forest Service must analyze and adopt an alternative that lets the Mount Timpanogos Wilderness be wild by allowing the metal remnants of the Quonset hut to fade with time or by using wilderness-compatible means to remove it. The remaining rock and cement could be safely dismantled and allowed to fade back into the Wilderness. The claim that it can't be dismantled (or even repaired) using traditional means is false, as the Forest Service built the hut without motorized equipment.

The EA does not detail how many helicopters flights are expected or the duration of the project. It only alleges, without proof, that stock is impractical and stock users (unidentified) said they wouldn't take their animals up there. The Forest Service has wilderness stock. There is no indication the agency asked its own people. For such a massive undertaking, an Environmental Impact Statement (EIS) is needed, especially because the Forest Service proposes a project in Wilderness involving helicopter flights, motorized equipment, jackhammers, cement mixers, and other motorized tools.
