Comments: First off, thanks very much for removing fuels near Red Lodge in order to reduce fire risk near human populations.

As a property owner directly adjacent to the Custer National Forest, across from the dirt portion Palisades Campground road, I do have concerns about heavy truck traffic kicking up dust and blowing on our house from that road. That happens now when cars and trucks speed along the road and if the wind blows our direction. Could it be treated with oil ahead of time to reduce dust? Additionally, I have concerns about heavy truck traffic damaging the paved portion of Palisades Campground Road. Quite a few people now live off of that road, and we'd appreciate it if the road could be repaired as needed after the thinning work is complete.
