Comments: The Forest Service must analyze and adopt an alternative that lets the Mount Timpanogos Wilderness be wild by allowing the metal remnants of the Quonset hut to fade with time or by using wilderness-compatible means to remove it. The remaining rock and cement could be safely dismantled and allowed to fade back into the Wilderness. The claim that it can't be dismantled (or even repaired) using traditional means is false, as the Forest Service built the hut without motorized equipment. To remove it industrially (or even worse rebuild it industrially, which is against the intentions of a wilderness) an Environmental Impact Statement (EIS) is needed, especially because the Forest Service proposes a project in Wilderness involving helicopter flights, motorized equipment, jackhammers, cement mixers, and other motorized tools.
