Title:

Comments: I oppose exploiting the Black Hills for more drilling for many reasons. The impacts may not effect me personally in the future, but for those who are left behind and future generations, I am concerned. There are health concerns, and more importantly, environmental concerns-to include water contamination as the most concerning. Along with that, would be wildlife habitat, the beauty of the area, the noise pollution, disruption of the natural ecosystem-for what? Greed? Profit?I would also be concerned about the cultural aspects-the sacred lands and simply the beauty of the area, nature, the wildlife habitat. We should think further ahead and leave behind these things for future generations.
