Title:

Comments: This plan seeks to prioritize economic development and industries such mining over the well-being of animal populations & ecosystems. Industrialization of our land contaminates nearby forest & vegetation and protected animal habitats. I am distressed over the prospect of drilling, clearing land, the amount of noise and air pollution from the project and construction traffic. I urge you to oppose any government and individuals who try to destroy habitat that endangered species need to live, eat, and raise their young. Common sense, science, and the Endangered Species Act itself tells us that habitat destruction harms species.

These habitats support species of concern. They are critical areas of wildlife congregation. Limestone plateaus are recognized as important ecosystems with significant conservation value. However, they face threats from activities like drilling, quarrying & mining which can destroy or disrupt the surrounding habitat, impacting species that are highly adapted to these environments.

Habitats may take years to decades to recover. The effects will increase in magnitude as more projects are built. I am counting on you to protect our beloved Long Draw and Limestone Plateau areas.
