Comments: To whom it may concern.

I own the portion of property on Cayada Creek USFS 7810 which the CARLA Project will directly impact on both sides. We require 24/7 access to property.

At this point I oppose the project. I understand the importance of timber thinning to allow for healthier timber and vegetation and wildlife. But to be quite frank, I didn't purchase land in the middle of the forest to have the forest around me to be cut down.

I have learned that part of the plan is to put more campsites in by Coplay and East lake, But I have not seen your plan on how you are planning on helping the landowners in this area, with the increase of trespassing, dumping and shooting this is going to bring. Signs and gates do nothing. I personally had someone try to pull a firearm on me. Telling me that they were entitled to walk my land...As it is this is something we have been dealing with, and can only imagine what it may bring. Aswell as the additional road maintenance this will require.

Then we have the bridge. Not knowing what the future may hold for the access, do to the closing of the fairfax bridge. Seem to me this is a waste funds that could be used elsewhere.

I see the plan is to redo the road 7810 to the trailhead. As it is the forest service has a hardtime trying to maintain the road. With the additional thousands of vehicles this will bring yearly. Is there funds to allow for the increase of maintenance this will require? My understanding is that the forest service has limited amount to no funds, and does not want to put any more money into the road. Is this just going to be a one time thing? Redo the road just enough to get the trees out, or will there be yearly on going maintenance, that keeps up?

I can see the forest service just picking portions of the project to complete, and letting the rest go to the wayside.

Sincerely, Mr Rauscher
