First name: Sparrow

Last name: Womack

Organization:

Title:

Comments: Conecuh National Forest is a precious area of longleaf pine ecosystem and pitcher plant bog that is home to numerous at-risk species. Oil and gas leasing will not create local jobs and will instead threaten sensitive habitats and species. Please make the choice to protect Alabama's biodiversity, recreational areas, and waterways by selecting Alternative C to not allow the leasing of the forest for oil and gas extraction.
