Title:

Comments: My comments are based on two facts:

- 1) Global warming is real
 - 2) Both economically or socially, the greater Tetons region can never be healthier than the region's public lands.
- This is applies especially to the B-T.

Based on these facts, I have one overarching comment re. the plan: It must be laser-focused on maintaining forest health. From that perspective, economic and other uses are utterly trivial - they won't mean a thing if the forest isn't healthy. And the forest is under such broad and significant threats that it would be madness for us to believe that luck or chance or passive management will maintain the forest's health.

Thank you for the incredibly important and difficult work you do.
