Comments: I absolutely love this idea and the ongoing management of our forest and mountains in this region. It is needed and I fully support this area being under a management plan. I want to suggest that each of these new parking areas that their are parking spots retained on a first come first serve basis for vehicles that are registered and up to date for Park and Summit Counties. One of the reason we all work so hard to live here and make this life happen is due to the proximity to these types of locations. When our ability to recreate and enjoy an area is impacted due to reservation system it is hard. We should have the ability to try and go to these local areas without having to preplan like we live somewhere else. A lot of locals recreate when opportunities present themselves in their schedule and should not have to plan ahead. for example the other day my son and I were talking about going for a hike together due to a change in plans. He suggested climbing Quandary but due to our last minute conversation we were unable to go due to the reservation system and opted for a local bike ride instead. My son and I should have the opportunity to at least try. These issues are due to the proximity to the Front Range population centers not due to the local community. Each group should be managed differently. Outside of Park and Summit County residents should be required to park and ride the shuttle and utilize the infrastructure already in place or make reservations. Locals should have the opportunity to recreate where they live.
