Title:

Comments: Here are my comments about the draft assessment.

1. Include the current migration data. This data should drive what activities can be done in the forest. This includes mineral development, recreation and grazing.
2. Consider an annual Bridger Teton use permit. This can help pay for maintenance of trails, restrooms, habitat restoration and education.
3. Composting toilets in the high use areas. Fremont Lake has shore camping without toilets.
4. Education. We need our children to be stewards of these lands. Many have not been taught Leave No Trace or the importance of managing our public lands.
5. DO NOT open up more roads to ORV travel. Habitat needs to be conserved.
6. Shut down roads in the spring until they are dry enough to drive on.
