Organization: 350 Colorado

Title: Roaring Fork Valley Coordinator

Comments: This is my major concern, if we are allowing gas pipelines to be replaced why not exceed current regulations and requirements? Since the original project has lasted 60 years and is needing a complete upgrade lets make sure that any pipeline to replace it has the best possible engineering and technology. It would be forward thinking as well as thoughtful for future generations. Please think about making a statement that addresses the proposal. There is a pipeline accountability act in Congress that needs to be passed which will mandate rapid isolation capabilities in the case of failure. It also requires new safety rules for CO2 pipelines and studies on hydrogen blending in Natural Gas Systems.
