Comments: this comment is concerning the proposal to swap land use allocations around Lost Lake recreation area. my concern is removing late secessional reserve designations for an area around the campground to do active management to reduce wildfire risk to structures. it is important to be transparent in this process and that areas of the forest proposed for the land use swap are appropriate and will actually help to protect old growth forest habitat in the long term. it's important for the Forest Service to balance the needs of humans with those of the land.
