Comments: In regards to the West Reservoir #67436 project we would like to send our support for this project. Most of the Flathead National Forest is dense, dark and overgrown and can benefit from logging projects and selective burning. The logging benefits everyone. It provides jobs, income, material land helps with the overall economy of the Flathead Valley. It thins the forest and opens up the land for a healthier forest which is better for all animals for grazing and habitat. It also thins the forest to help with fire prevention. The selective burning is great for the habitat in the area that they can not log. As a lodge owner and outfitter and Flathead Valley local we see nothing but good coming from this project Thank you!
