Title:

Comments: my objection to this plan continues. this is wilderness area. leave wilderness areas alone and stop sending in hordes of people to disturb every single area of our public forests to make money, which is usually your focus. wilderness should be for few people and setting it up for mobs is not the intent of wilderness. i also want to protest strongly about how hard it is for unsophisticated computer users to get the information on what has happened since you opened public comments. how about posting what was said by others on this issue so we can see. what you think you analyzed from the public comments is also necessary for us during this comment period of objections. and also how you have changed the plan thus far. all of that is very very hard to find oany infromation on and i think this agency does the public a disservice in coming up with plans in the way you withhold information. it all should be very easy to get for allcomputer users, even those not sophisticated ones. certainly those without a computer wouldnt have the least information on this at all so that you are missing huge numbers of us citizens who also want to protect this land from mobs. jean publice jeanpublic1@gmail.com please do a better job. i think this job is slipshod.
