Comments: Hello,

I do not agree with all the environmental explanations and horse information you have given with all your data you have listed. I have had horses most of my life, know and understand them well and, I have lived on the National Forest here for many years and watched the horses closely. I recognize that the herd may need to be thinned, but if you go through with your plans, you will be totally eliminating the wild horse herd!! There needs to be more horses left, no sterilization done, plus more room for them to roam! Let people enjoy the beauty and joy the horses bring. They do not deserve this.... the people or the horses.

I am writing this to send but have doubts that you will even care. I only hope that someone may....
