Title:

Comments: I oppose the Canyon Forest Restoration Project. Despite being called "restoration," this project would extract 19+ million board feet of timber - including from stands that were never clearcut and exhibit "great diversity of species, age and habitat structure" according to Forest Service documents.

NEPA violations: This scale of project (2,000 acres, 11+ miles of roads, multiple threatened species) requires a full Environmental Impact Statement, not just an EA. The Forest Service considered but rejected analyzing alternatives that would protect fire-regenerated stands.

Clean Water Act: This affects the Dungeness municipal watershed and a river segment already listed as impaired for temperature. Sediment from roads and loss of riparian vegetation threatens water quality.

National Forest Management Act: Logging naturally diverse, fire-regenerated stands (80-164 years old) contradicts requirements to maintain forest diversity and viable wildlife populations.

Arbitrary and capricious decision-making: Calling this "restoration" while admitting it will "degrade 1,988 acres of habitat" and "remove 25 acres of dispersal habitat" is contradictory and pretextual.

Thank you for your kind consideration.
