Comments: After reading the One MileLonesome Ridge Intergrated Resourse Project Environmental Analysis a nd Finding of No Significant Impact, I say all of the described actions should go forward, be implementedas planed to meet the intent of the current Forest Management Plan. This is truelyan integrated management proposal, [laning and implementing the projects in a coortinated manner.

There is a need for all of the projects to be carried out, as described. The silvicultural prescription for each to the selected stands is appropriate.I find this EA to be through and concise. It more than adequalelyaddresses all of the issues as described in the EA.

As for public involvement, this proposal came to my attention through the public notice announcement published in the Berlin Daily Sun, September 2024. If a person is interested in White Mountain National Forest Management, there is ample opportunity for informing ones self about what is proposed for the Forest.

This EA document was well done. I commend the environmental analysis team that did the work on the ground and brought it forward through this documentation.

Another point I want to make is that investments have been made in this HMU for almost a centurynow, the Norway Spruce plantation for example. Now and in the future is the time to realize the benefits of those investments. Past practices were done to grow quality timber. Now is the time to realize the benefits as they come due.

Thank you for this opportunity to comment.
