Comments: I would like to start off by thanking all the individuals that helped in the design of this project, from walking these wooded areas to filling out all the forms, thank you for all those tedious hours. We need to be better stewards of our forest area including the wildlife enhancement. The proposed areas are in desperate need. The loss of wildlife and timberland to a wildfire is proof of LACK of management. Thick over grown area provide minimal feeding and wildlife habitat. Most wildlife are nocturnal in nature and are very active in opener areas at night.

I think this is a great start. One request I would suggest is that all larch firewood be stock piled and reserved for the local tax payers, the school and NO commercial individuals be allowed access to these stock piles of winter time heating fuel.
