Comments: Stop the forest treatment (logging) in the Methow! Science and data shows thinning and logging INCREASES the risk ind intensity of wildfires. Our local economy depends on outdoor recreation not resource extraction. We do not want OUR land and ecosystem disrupted including the impact of log trucks on our local roads and highways. Our community values the forests and the wildlife. Money and time is spent trying to protect many species that depend on unmanaged forests. Wolves, fishers, Western gray squirrels, lynx, wolverines. Also, logging will impact our valuable streams and rivers that have endangered animals trying to survive. Western pearl shell mussels, short faced lanx, ashy pebblesnail, Okanagan crayfish, bull trout, stealhead and Chinook salmon.f
