Comments: I am writing this letter to voice my opposition to this project. The scale and loss of critical habitat in naturally fire regenerated stands of 80- 164 year old biodiverse forests would affect critical habitats. The forest service admits that Northern Spotted Owl, marbled murrelet and bull trout habitat would be adversely affected. This project because of its size requires a full EIS. The FS considered but rejected analyzing alternatives that would protect fire regenerated stands.

The Clean Water Act should cancel this project because of the Dungeness municipal watershed and associated Salmon and bull trout concerns.

The arbitrary and capricious nature of the decision making process around this "restoration" is obviously ill planned , contradictory and pretextual.

This is a thinly veiled attempt to undermine standard forest management and log more old forest that should be preserved.
